

HANDS OFF MY HORMONES!

Take a Stand Against Endocrine Disruptors (EDC)

the endocrine system

is composed of **HORMONES** and **GLANDS** (think keys) that *transfer information* to target cell receptors (think locks).

an endocrine disruptor

MIMICS a natural hormone, fooling the body into thinking that it is the true key to the cell's lock, creating *undesirable reactions* throughout the body that *can lead to disease*.

is this dangerous???

The **UN** and **WHO** believe *it is*. In 2013 they published a comprehensive report that calls on member states to both manage EDCs and do further research on the effects on wildlife and humans.

20%

of DES Daughters (women exposed in the womb to the Endocrine Disruptor - diethylstilbestrol or DES) experience preterm labour, compared with 8% of unexposed women.
